

AP Police SI Prelims 2026 — PMT / PET Standards & Training Plan

The written exam is only the start — the Physical Measurement Test (PMT) and Physical Efficiency Test (PET) decide the rest. Standards below are based on AP SI sources; **the exact qualifying figures and PET event marks will be confirmed in the official APSLPRB notification**. Train from now — fitness can't be built in the final week.

Selection Flow

Prelims (written) → **PMT** (body measurements) → **PET** (physical events) → Mains (final written) → Medical & verification.

The PMT is qualifying: failing the minimum height/chest/weight standard means disqualification regardless of written marks.

Physical Measurement Test (PMT) — Standards

Candidate	Minimum Height	Chest / Weight
Men (general)	167.6 cm	Chest 86.7 cm with min 5 cm expansion
Women (general)	152.5 cm	Weight at least 40 kg
Men (relaxed categories/specific posts)	~160 cm	Chest ~80 cm with 3 cm expansion
Women (relaxed categories)	~150 cm	Weight at least ~38 kg

Relaxations apply to certain categories (e.g. ST) and specific posts. Confirm the exact figures for your category and post from the notification.

Physical Efficiency Test (PET) — Events

The AP recruitment board has moved to a **reduced set of events** and replaced the old 5 km run with a shorter (about 1 mile / 1600 m) run. The PET for AP police posts has generally included:

- **100 m run** (speed)
- **Long jump** (explosive power)
- **1600 m / long-distance run** (endurance)

Marks are awarded by time/distance achieved. **The exact SI events, distances, qualifying times and marks will be specified in the official notification** — some posts and genders

have different benchmarks. Train across speed, power and endurance so you are ready whatever the final event list.

12-Week Training Plan (run alongside written prep)

Weeks 1-4 — Base building

- **Running:** 3 days/week, easy 2–3 km jogs; build comfortable endurance.
- **Strength:** bodyweight squats, lunges, push-ups, planks — 3 sets, alternate days.
- **Mobility:** daily 10-min stretching (hips, hamstrings, calves) to prevent injury.

Weeks 5-8 — Build speed & power

- **Sprints:** 6–8 × 100 m at near-max effort, 2 days/week (full recovery between reps).
- **Long jump drills:** practise the run-up, take-off and landing; 3 chances mindset.
- **Endurance run:** one longer run (1600 m timed) each week; track your time.
- **Strength:** add jump squats and broad jumps for explosive power.

Weeks 9-12 — Sharpen & simulate

- **Mock PET day** once a week: do 100 m, long jump and the timed run back-to-back as in the real test.
- **Taper** in the final week before the test: lighter sessions, rest, hydration.
- Use **standard athletic running shoes** (spikes are usually not allowed).

Nutrition & Recovery (general guidance)

- Eat balanced meals with adequate protein, complex carbs, fruits and vegetables; stay well hydrated.
- Sleep 7–8 hours — recovery is when fitness is built.
- Avoid crash diets or extreme regimens; steady, consistent training wins.
- *For any personalised diet or medical concerns, consult a doctor or qualified trainer.*

Test-Day Checklist

- [] Hall ticket / admit card for the physical test
- [] Required ID and certificates for verification
- [] Proper athletic shoes and sportswear
- [] Arrive early, warm up thoroughly, stay hydrated
- [] Read each event's instructions; use all allowed attempts (e.g. long jump's best of three)

Key Reminders

- The PMT is pass/fail on measurements — know your category's exact minimums.
- Start endurance and sprint training now; the body needs months, not days.
- A medical examination follows the PET — maintain overall fitness (vision, etc.).

Standards and PET details here are from AP SI sources and may change. Always confirm height/ chest/weight minimums, PET events, distances, timings and marks against the official APSLPRB notification when it is released.
